What is a switchgear used for?

Switchgears are used in an electric power system to safeguard, control, and monitor electrical equipment. Additionally, a switchgear has the ability to de-energise a piece of equipment so that repair can be done on it, as well as to clear upstream faults so that current loads flow smoothly.

What are the different types of switchgear?

There are two main types of switchgear: enclosed and open. The enclosed type is designed with safety as the priority, whereas the open type is valued for its ease of maintenance. Switchgear plays a vital role in a wide range of applications such as power plants, substations, factories, and buildings.

Why is the switchgear industry growing?

The main driver of the switchgear industry's growth is the increase in investments in T&D infrastructure. An electrical component known as switchgear is made up of circuit breakers, fuses, and electrical disconnect switches. Switchgears are used in an electric power system to safeguard, control, and monitor electrical equipment.
