How should a base station antenna be installed?

The hardware installation guidelines are limited but important for reliable base station performance. The base station antenna should be installed in open sky conditions, away from external influences that hinder the direct line of sight between the antenna and the GNSS satellites.

How do I install a base station?

The base station must be mounted so that its light sensor is not illuminated by the area lighting or other light source. Remove the white outer cover of the base station. Loosen the hex head M8 bolt located between the two covers of the base station. Lift it up. Slide the base station case up to release it from the keyhole slots on the back plate.

Where should an antenna be installed?

In general, this means that the ideal antenna installation is near the centre of the work area. For larger work areas (several 10's of km's), it is advised to place several base stations for optimal performance and easy selection of the nearest base station.

How do I make a base station a primary?

is selected as the primary. Select from the drop-down menu of a secondary base station to make it at base station the primary. Primary: RPNxx (-xxdBm): This option is visible when the base station is a secondary level base station whose sync source is the primary. Example

How do I register a base station?

to be registered at the base. Connect the base station to your network and it until the LED is green. Press the menu key on the handset, with the exception of the M25 where you press the enter of the navigation key. The main menu screen (Fig. 1 lay. Fig. 1 Fig. 2 Fig. 3 Type *47* on the keypad. The IP

How do you mount a M900 base station?

sticks securely into place. Make sure it is securely affixed before you hang the M900 on the wall. For optimal radio coverage, place the base station as high as possible, preferably at an angle other than vertical on a wall or pillar. Note: Do not mount the base station upside down as this would signifi
